Women's intimate cellular care

## Introduction

**Female private care:** There are more than 3 billion women in the world , of which nearly 2 billion women have private care needs. Stem cell private care products can improve vaginal relaxation, restore vaginal wall elasticity; improve vaginal lubrication, solve dryness problems; improve vaginal environment and pH value, antibacterial and anti-inflammatory, prevent HPV infection, and even promote HPV infection to negative, thereby preventing cervical cancer; promote perineal blood circulation, solve common endocrine problems; improve the color of female vulva and enhance beauty. Thus, you can achieve a healthy body in a youthful state.

**Men's private care :** Since HPV infection in women is often caused by men, both husband and wife must undergo HPV treatment at the same time to completely cure HPV infection in women and prevent it from developing into cervical cancer in the future. This product can effectively prevent and treat HPV infection in men . It can improve the blood supply to the penis, making it larger and thicker. It can improve the blood supply to the testicles and enhance their male function . **The main mechanism of action of** this product is to improve the blood supply to the penis through the cytokines it contains that promote capillary regeneration, thereby making it larger and thicker. It can improve the blood supply to the testicles, making them secrete more androgens, thereby enhancing male function .

---

Antibacterial and anti-inflammatory --- The cells contain natural anti-inflammatory properties. Through induced separation technology , the vaginal environment and pH value are improved ; with the treatment of professional institutions and instruments, the vaginal retention time is longer. It has a significant killing effect on pathogens that cause various types of vaginitis and cervical erosion, and HPV positive turns negative.

Firming and repairing --- effectively keeping the vagina moist and smooth, the large amount of cytokines contained are fully absorbed by the vaginal wall. Effectively promote metabolism, accelerate wound healing, and quickly improve symptoms such as vaginal dryness. Suitable for the treatment and maintenance of women of different ages.

Aesthetic repair --- stem cells have the characteristic of automatic homing. After being injected into the human body, they will gather at the corresponding site of inflammation , restore the vagina's ability to self-clean , improve the color of the female vulva, enhance its beauty, reduce various gynecological diseases, and achieve a youthful and healthy body.

1. People suffering from various gynecological diseases.
